PARTNER HANDBOOK

Support Portal Guide for Partners

Everything your team needs to resolve user inquiries independently — without escalating to the support team.

PREPARED FOR	COVERS	VERSION
Partner Support Teams	**Verification · Cards · Statements**	**2026 Edition**

Overview

The Support Portal is a tool that helps you resolve user inquiries yourself, without escalating to the support team. It allows you to handle common user requests efficiently on your own.

At the same time, if a user's issue is beyond what you can resolve yourself, the portal also lets you create a ticket directly with the support team.

⚠ **Important:** There is currently no overall dashboard covering all users — this feature is being implemented. For now, search and data are only available on a per-user basis, using the user's **User ID**.

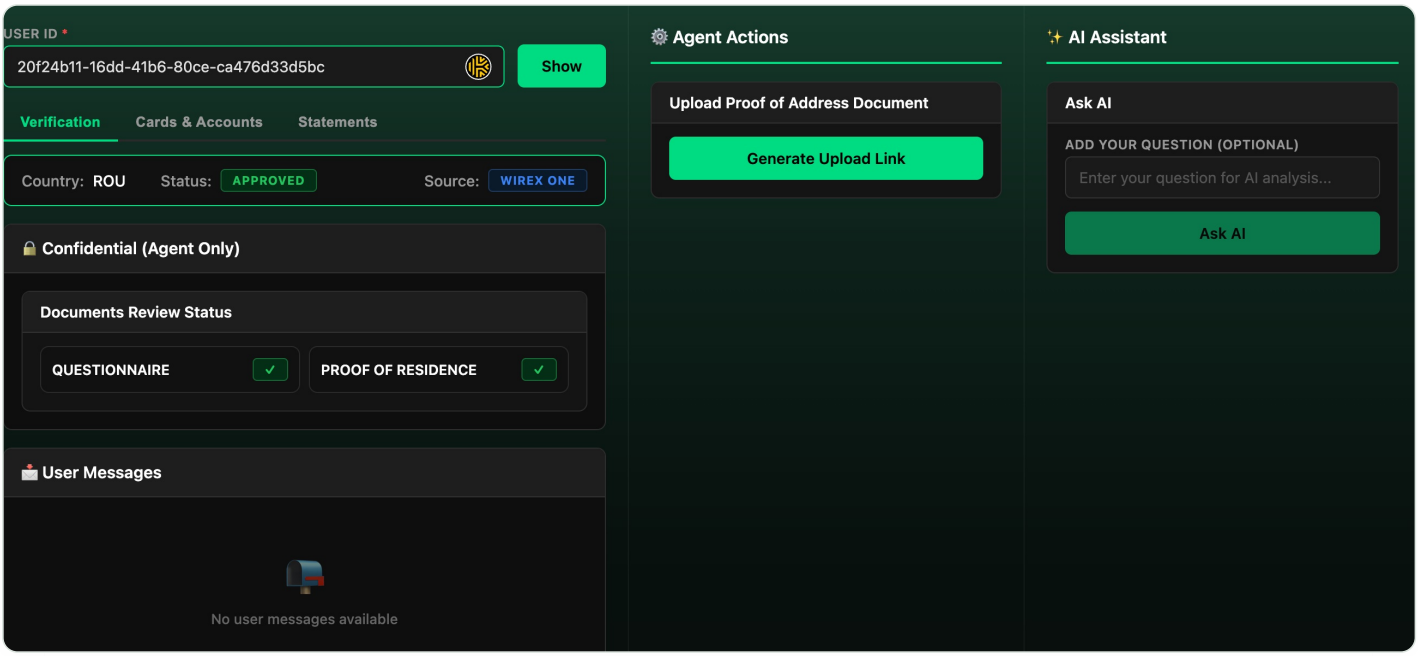

What's inside

1 **Verification**
Check verification status, understand rejection reasons, generate document upload links, and use ready-made response templates.

2 **Cards**
View personal data, cards and transactions, manage card limits, check reversals, initiate chargebacks, and offboard users.

3 **Statements**
Generate user statements for any period and blockchain network directly from the portal.

1 Verification

The Verification tab

In this section you can:

- ✓ Check the user's verification status
- ✓ Generate a link that lets the user add missing documents themselves
- ✓ Find out the reason for a verification rejection
- ✓ Find out which documents the user is missing to complete verification

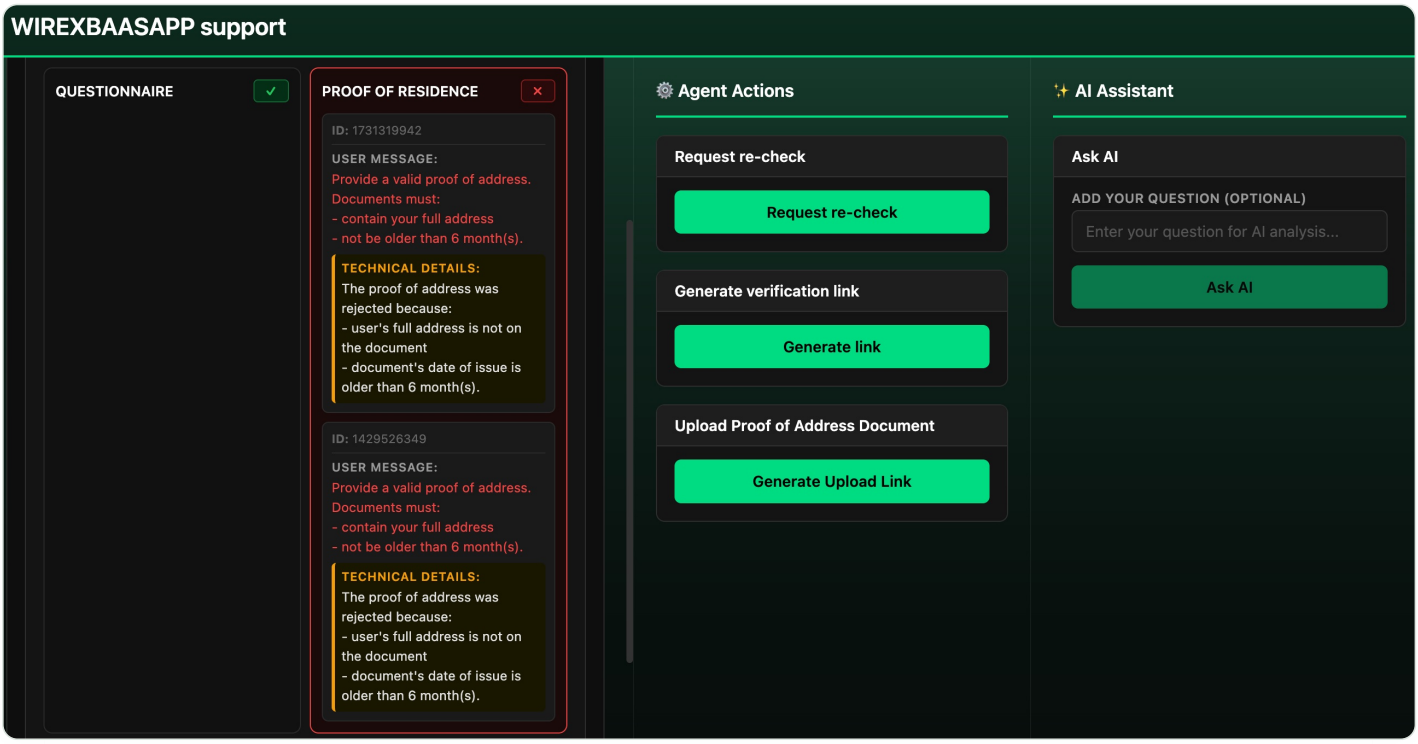

Viewing verification data

1. Enter the user's **USER ID** in the corresponding field and click **Show** to display the details.
2. Go to the **Verification** tab (the **Cards & Accounts** and **Statements** tabs are also available).

The verification block displays:

- **Country** — the user's country
- **Status** — verification status (e.g. `APPROVED`)
- **Source** — verification source (e.g. `WIREX ONE`)

Reason for document rejection

Expanded view of a rejected Proof of Residence

If a document is marked ✕ (e.g. **Proof of Residence**), expand the block to see:

- **USER MESSAGE** — the message the user sees, explaining document requirements
- **TECHNICAL DETAILS** — the exact technical reason for this rejection

If several documents were submitted, each attempt appears as its own block with a unique ID.

Agent actions — verification

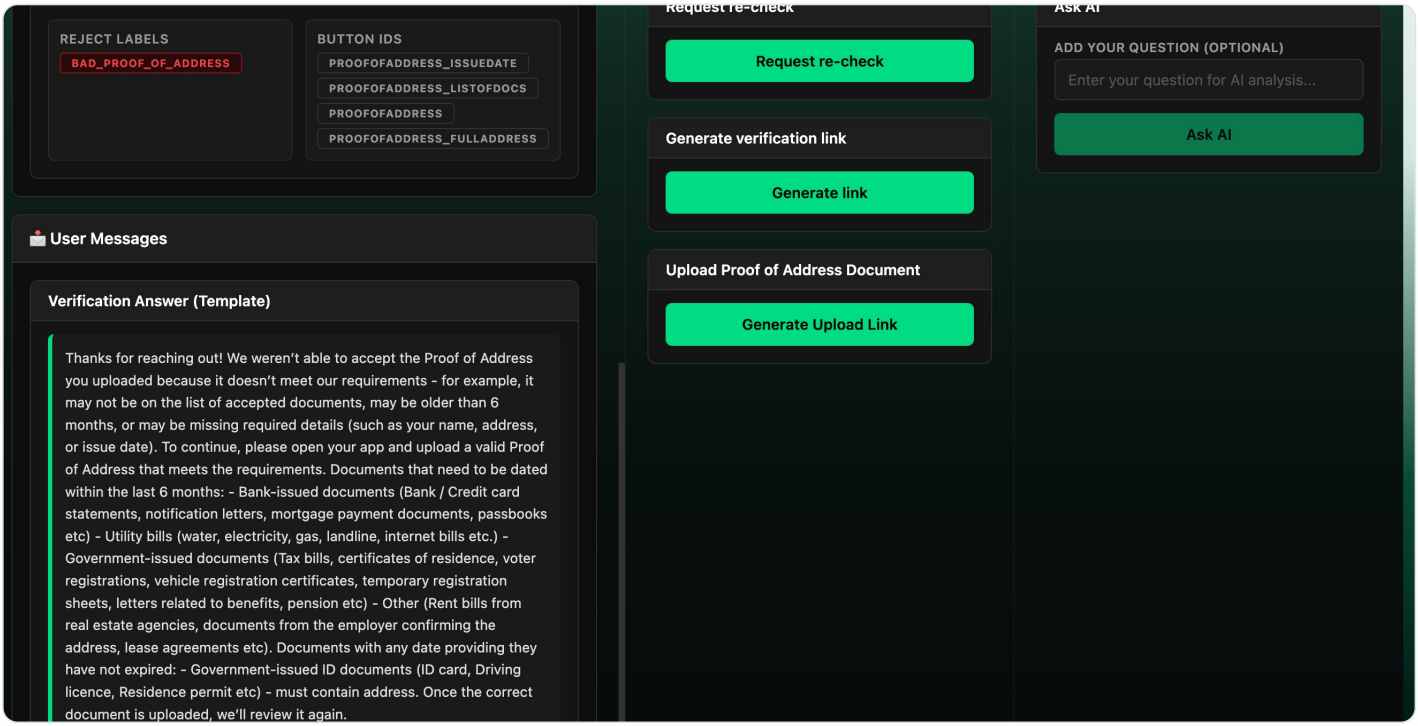

- **Request re-check** — request a re-check of the user's profile
- **Generate verification link** — send a link for the user to complete or repeat verification
- **Upload Proof of Address Document** — upload a document on the user's behalf, if they already sent it via your own channel

Reject Labels & Button IDs

Technical labels that pinpoint the exact failure:

- **Reject Labels** — rejection reason code (e.g. `BAD_PROOF_OF_ADDRESS`)
- **Button IDs** — specific document fields at fault (e.g. `PROOFOFADDRESS_ISSUEDATE`, `PROOFOFADDRESS_FULLADDRESS`)

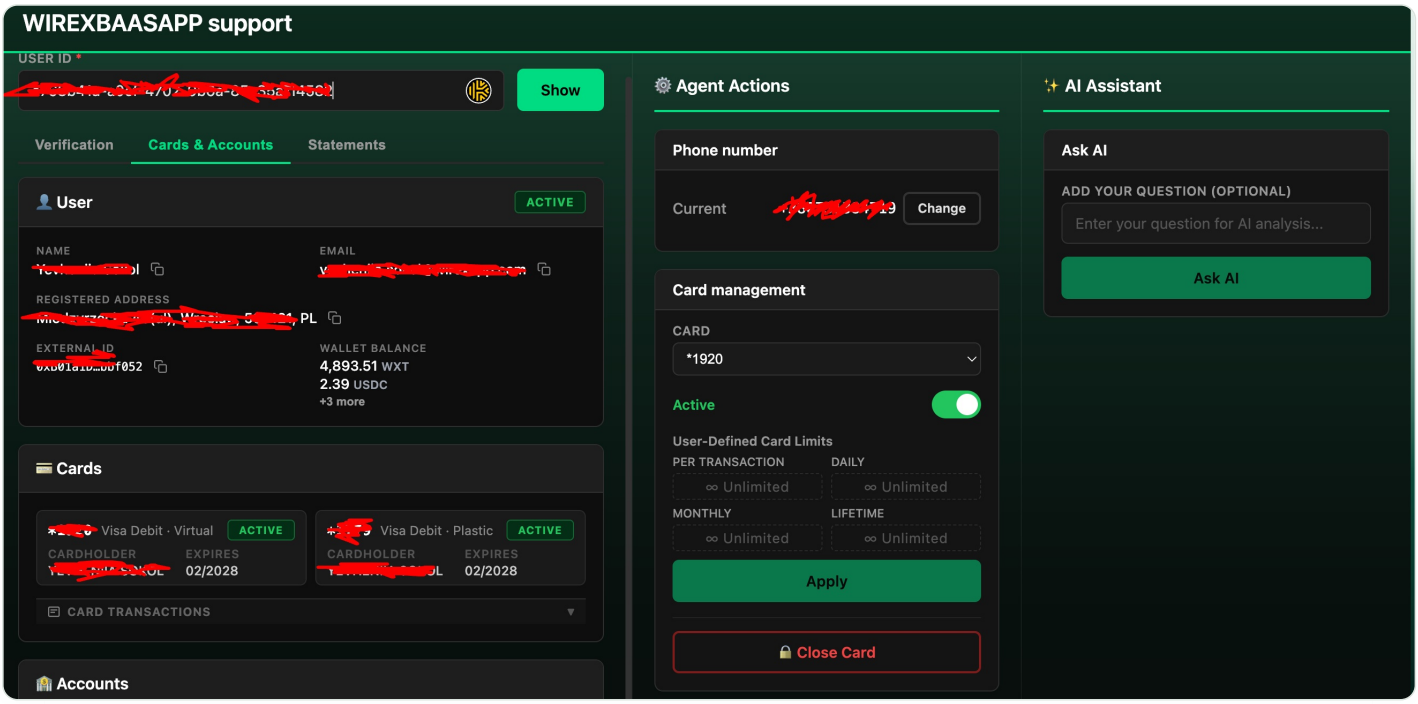

Ready-made response template

Verification Answer template, ready to send to the user

Copy this template and send it directly to the user — no need to write a response from scratch.

2 Cards

The Cards & Accounts tab

In this section you can:

- ✓ View the user's personal information
- ✓ View cards and their transaction history
- ✓ View SEPA details and transfers
- ✓ Change the user's phone number
- ✓ Lower a card's limits, block, or close it
- ✓ Check reversals and initiate a chargeback
- ✓ Offboard the user

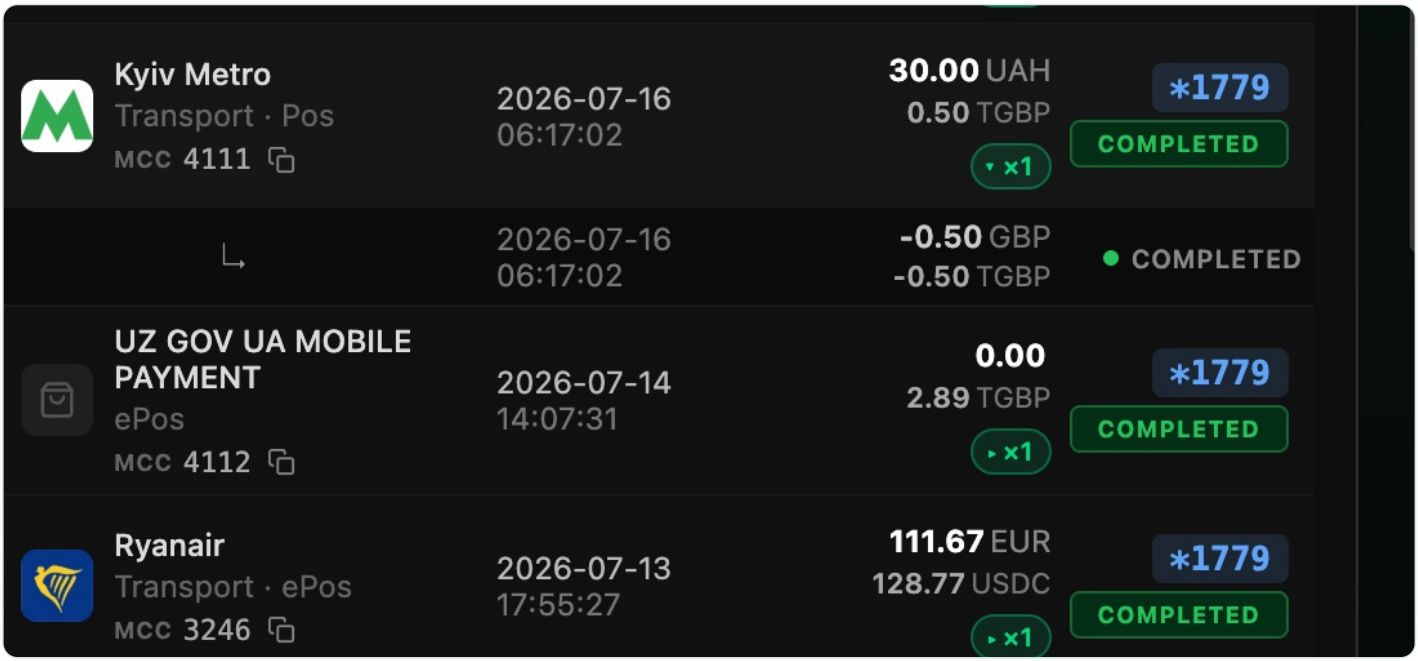

Personal information

The **User** block displays **Name**, **Email**, **Registered Address**, **External ID**, and **Wallet Balance** by currency. The user's status (**ACTIVE**) is shown top-right.

User's cards

The **Cards** block lists each card with status, cardholder name, and expiry date. Expand **Card Transactions** to see the transaction history.

Transaction details

Card transaction history

Each transaction shows merchant name and type, MCC code, date and time, amount in transaction and account currency, card used, and status. Related operations (e.g. a partial refund) appear as a sub-line.

Chargeback

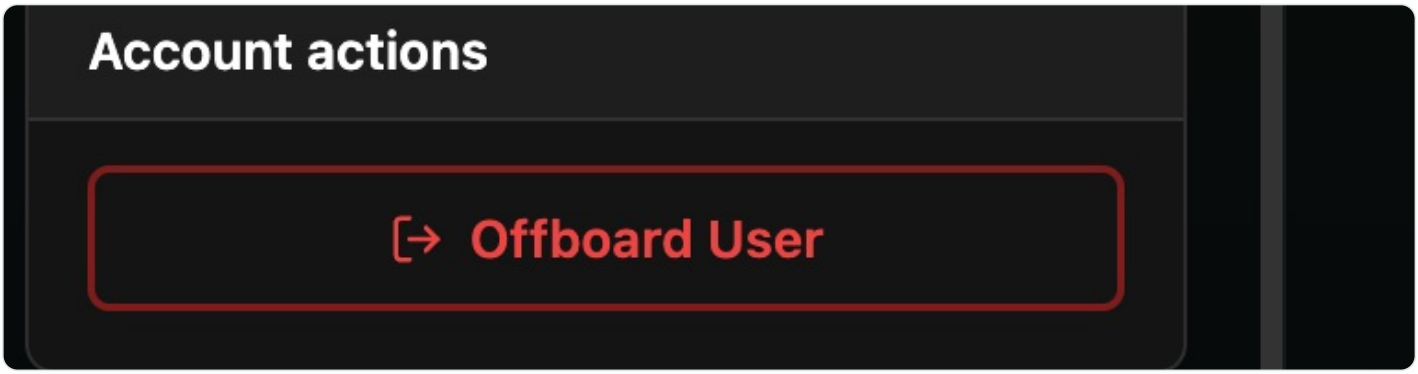

Initiating a chargeback on a selected transaction

Select a transaction to check for reversals, then click **Initiate Chargeback** if needed.

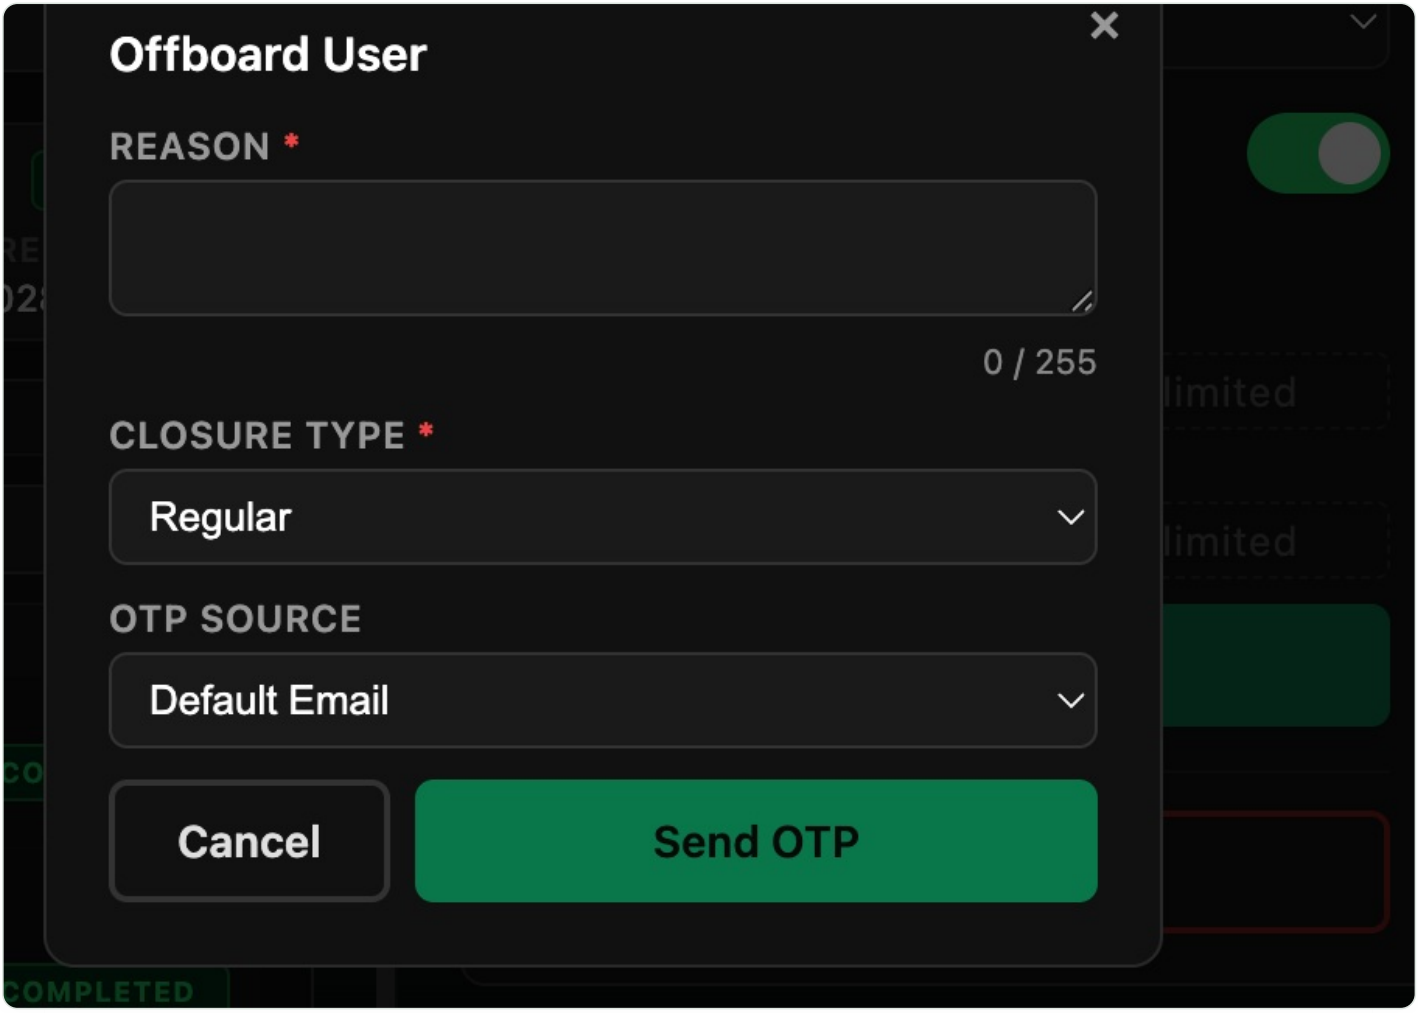

Phone number & card management

- **Phone number** — click **Change** to update the user's current number
- **Card management** — select a card, toggle **Active**, and set **User-Defined Card Limits** (Per Transaction, Daily, Monthly, Lifetime — default `∞ Unlimited`), then click **Apply**
- **Close Card** — permanently closes the card (irreversible)

Offboarding a user

Offboard User in Account actions

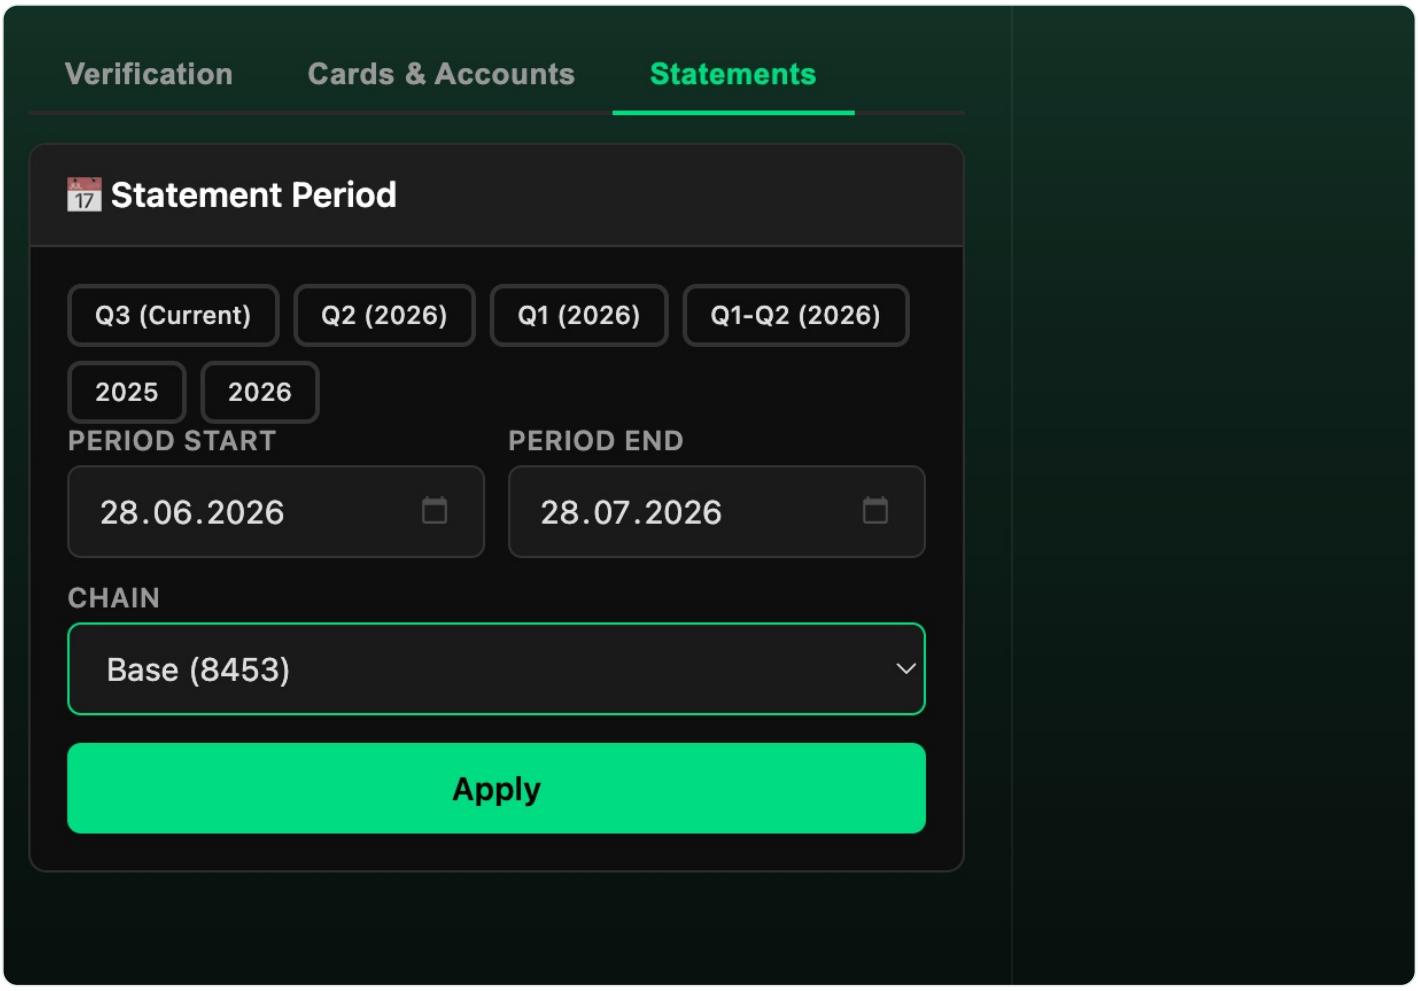

Offboard User form

Fill in:

- **Reason** — required, up to 255 characters
- **Closure Type** — e.g. `Regular`
- **OTP Source** — e.g. `Default Email`

Click **Send OTP** to send the confirmation code and complete the offboarding.

3 Statements

Generating a statement by period and chain

On the **Statements** tab, you can generate a user statement yourself, built based on a blockchain explorer.

Generating a statement

1. Select the **Statement Period** — a quick option (e.g. `Q3 (Current)`, `Q2 (2026)`) or a year (`2025`, `2026`).
2. If needed, edit exact dates in **Period Start** and **Period End**.
3. Select the network (**Chain**), e.g. `Base (8453)`.
4. Click **Apply** to generate the statement.

Need help beyond this guide?

If a user's issue is beyond what you can resolve using the Support Portal, create a ticket with the support team directly from the portal.
